Notes: Rate per 1000 central line days; 95% confidence interval calculated for rates based on exact Poisson distribution; pediatric oncology special care locations specialize in patients who require management and treatment for cancer and/or blood disorders

Source: Central Line-Associated Bloodstream Infections and Central Line Insertion Practices in California Hospitals, January through December 2012. California Department of Public Health

<sup>\*</sup> Hospitals with only one acute care campus associated with their license were listed by the campus name; hospitals with more than one campus associated with their license were listed by licensee names with acute care campus name(s) indented below

<sup>\*\*</sup>Statistical interpretation indicates hospital-specific rates that were statistically higher (●), lower (O), or no different (⊙) than California average rates, or rates that were not tested due to too few central line-days or too few hospitals reported (+)

<sup>†</sup> Hospital reported infection data aggregated over all acute care campuses

<sup>‡</sup> Hospital reported infection data separately by acute care campus
